

How to set OnClickListener for TextView in Kotlin Android

In Android, TextView is a child class of View, and hence can use the method `setOnClickListener()` on the object of TextView.

Following is quick look into code to set OnClickListener for TextView in [Kotlin Programming](#) :

Quick code snippet

```
// get reference to  
textView
```

```
// get reference to textview  
val tv_click_me = findViewById(R.id.tv_click_me) as TextView  
// set on-click listener  
tv_click_me.setOnClickListener {  
    // your code to run when the user clicks on the TextView  
}
```

In this [Android Tutorial](#), we shall look into the layout xml file and Activity(Kotlin file) to set OnClickListener for a TextView. [Create an Android Application with Kotlin Support](#) ☐ and replace `activity_main.xml` and `MainActivity.kt` with the following content.

`activity_main.xml`

```
<?xml version="1.0"  
encoding="utf-8">
```

```
<?xml version="1.0" encoding="utf-8"?>
<android.support.constraint.ConstraintLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context="com.tutorialkart.myapplication.MainActivity">
    <LinearLayout
        android:id="@+id/ll_main_layout"
        android:layout_width="match_parent"
        android:layout_height="match_parent"
        android:gravity="center"
        android:orientation="vertical">
        <TextView
            android:id="@+id/tv_click_me"
            android:layout_width="wrap_content"
            android:layout_height="wrap_content"
            android:textSize="50dp"
            android:text="Click Me"/>
        </LinearLayout>
    </android.support.constraint.ConstraintLayout>
```

MainActivity.kt

```
package
com.tutorialkart.myapplication
```

```
package com.tutorialkart.myapplication

import android.support.v7.app.AppCompatActivity
import android.os.Bundle
import android.widget.TextView
import android.widget.Toast

class MainActivity : AppCompatActivity() {

    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)

        // get reference to textview
        val tv_click_me = findViewById(R.id.tv_click_me) as TextView
        // set on-click listener
        tv_click_me.setOnClickListener {
            // your code to perform when the user clicks on the TextView
            Toast.makeText(this@MainActivity, "You clicked on TextView 'Click Me'.", Toast.LENGTH_SHORT).show()
        }
    }
}
```

Following are the screenshots to demonstrate the `setOnClickListener` for `TextView` :
